Who Should Attend

This course is valuable for anyone involved in the installation and commissioning of Fujitsu Multi systems. The course is primarily aimed at Multi and Mini VRF System Installation Engineers and Commissioning Engineers.

Course Objectives

To develop an understanding of Fujitsu Advanced Multi Type Systems.

To obtain sufficient knowledge to install, commission and troubleshoot these types of systems.

Course Summary

Throughout the course, practical exercises will reinforce the learning process. The course will include:

- Introduction to Fujitsu, the course and its objectives.
- Introduction to the current product range.
- Explanation of terms and technologies (e.g. inverters, double swing louvres etc).
- Explanation of the differences between Multi and Simultaneous systems.
- Review of refrigerant and electrical circuit diagrams and basic operation.
- Pipe work, interconnecting cable and control methods.
- Practical exercises (e.g. special functions and commissioning procedure).
- Remote controller types – functions, setting up, fault codes.
- Fault finding - introduction and practical exercises.
- Website demonstration.
- Questions and answers.
